

Hello, Beechwood AP Calculus students!

Get ready for the best year of mathematics you've ever had!!

Welcome to the beautiful world of calculus!

There's no official summer assignment (as I think your summer break is important for recharging yourself and spending quality time with your family and friends!), however, I would **highly recommend** that you spend some time reviewing Unit 1 of AP Calculus (Limits & Continuity). As a reminder, we worked through this unit at the end of the 2023-2024 school year (after you took the AP Precalculus exam in May).

Various ways to practice these Unit 1 skills will be communicated on our Google Classroom page, so please join your appropriate section:

- Calculus AB – <https://classroom.google.com/c/NjkzOTQ2MDc2Njg4?cjc=d2xhhoo>
- Calculus BC – <https://classroom.google.com/c/NjkzOTQ2NDY3MzY3?cjc=67sn6f2>

You will take another test on Unit 1 (similar to the one you took at the end of AP Precalculus) at the beginning of the school year (could be as early as Friday, Aug. 16, 2024), so it's important you're fully prepared for this assessment. I plan to offer a couple optional, in-person review sessions later in the summer for anyone interested in working through some problems together. Details will be shared on our Google Classroom page.

I hope it's a wonderful summer for you all, and I truly can't wait to embark on this calculus journey together, friends! I'm so glad you're along for this ride!!

Sincerely,

C.J. Fryer | Mathematics Teacher
